DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: foreign priority data in the specification are missing.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 5-7 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Butzmann (2002/0175673 A1). Butzmann discloses the same invention as claimed: sensors 6-7 being perpendicular to measuring direction 8, magnets 10-11 having a field component in the x-direction (although not a main component). See Fig.1.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 3-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Butzmann. Butzmann discloses substantially the same invention as claimed, except for the sensors 6-7 being a Wheastone bridge or a half bridge. It is well known in the

Art Unit: 2862

sensor art that Hall sensors, such as 6-7, can be replaced with Wheastone bridge sensors or half bridge sensor in order to measure the positions of rotary objects. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Butzmann by replacing sensors 6-7 with Wheastone bridge sensors or half bridge sensor in order to measure the positions of rotary objects.

Allowable Subject Matter

6. Claims 8-14 are allowed.
7. Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
